

PDFium Text Layer Fixture

A deterministic document for text and coordinate extraction tests.

DOI: 10.1234/paperbridge.fixture

1. Reactor physics text

The effective multiplication factor is unity.
Neutron flux remains stable under the reference condition.
The benchmark value is $k\text{-effective} = 1.0000$.

Parameter	Value	Unit
Effective multiplication factor	1.0000	dimensionless
Neutron flux	2.50E+14	n/cm2/s
Delayed neutron fraction	0.0065	dimensionless

2. Two-column extraction fixture

LEFT COLUMN

Prompt neutrons are emitted
immediately after fission.

This text is drawn before the
right-column content.

RIGHT COLUMN

Delayed neutron precursors
govern reactor kinetics.

Column order must be assessed
before bilingual alignment.

Expected extraction characteristics

- Two pages with a normal selectable text layer
- Stable page size of 612 x 792 PDF points
- Character boxes available for visible text
